About Nellymoser

Nellymoser enables media companies and network operators to establish and grow their mobile media businesses. The company's award-winning mobile media services platform, combined with world-class mobile strategy and design, gives customers everything they need to deliver high-quality, interactive, rich mobile media experiences to the broadest audience. By managing service delivery for its customers, Nellymoser handles all the mobile channel complexities, from integration with existing infrastructures to compatibility with the rapidly growing number of handsets. Media companies and network operators can now reach more consumers and increase retention rates with mobile services that include on-demand audio and video, interactive and community features, and user generated content. Customers include MTV Networks, Warner Music Group, Hachette Filipacchi Media US, Microsoft, Adobe, Leapfrog, Ericsson, Vivendi Universal and Electronic Arts. For more, visit www.nellymoser.com.

POSITION DESCRIPTION

This vigorous well respected company is looking to hire an experienced, high-energy Sr. QA Engineer to support the company's growth and expansion. This position will be responsible for:

- Developing, reviewing, publishing, and implementing test plans for applications running on mobile handsets.
- Recording results and reporting defects.
- Analyzing reported bugs and working with software development, design, customer support, and project management teams to resolve bugs.
- Configuring and maintaining Linux based test systems.
- Developing and Improving test standards and procedures.
- Being a major contributor to the development of a QA test framework.
- Owning a feature or customer implementation from design to release.
- Leading a small test team throughout a project lifecycle.
- Providing technical guidance to other team members.

Job Requirements:

- Minimum 5 years testing consumer or enterprise based web applications
- 3+ years Software QA experience testing J2EE or J2ME applications in an n-tier environment (Apache, Tomcat, MySQL)
- Experience using source control and build/release tools.
- Interest in or experience with wireless technology.
- Adaptability to unfamiliar technologies.
- Confidence and ability to work and participate with minimal supervision in a fast-paced startup

environment.

- Ability to make intelligent trade-offs, know when to escalate issues, and pro-actively identify risks.
- Excellent oral and written communication skills
- Experience troubleshooting and isolating defects. Excellent problem solving and analytical skills.
- BS in Computer Science, Mathematics or equivalent.

Preference will be given to individuals with the following qualifications:

- Object Oriented programming experience or experience extending java-based tools such as HttpUnit or JUnit.
- Knowledge of performance testing methodologies.
- Knowledge of build/release processes.
- Knowledge of the mobile industry.
